KENBI SEPTICSOLID

DEODORIZING BIOLOGICAL TREATMENT OF SEPTIC TANKS

Sin Pictogramas

IECOMAN

B

DESCRIPTION

Biotechnological powdered product for the cleaning and maintenance of septic tanks. Formulated with natural origin surfactants, deodorizers, fragrances, flocculating agents, enzymes and facultative bacteria that liquefy and degrade the organic materia present in the urban wastewater; vegetal and animal greases, protein, celluloses, etc.

APPLICATIONS

Preventive treatment to avoid obstructions and bad odours within septic tanks. Improves the depuration of wastewater within the septic tanks of houses or industries placed in rural or isolated areas.

PROPERTIES

- Controls and reduces bad odours
- Improves the depuration cycle of the septic tank
- Includes a big variety of enzymes: lipase, proteases, amilase and celulase, which are able to degrade the compounds presents within the wastewater: celluloses, fat, proteins, etc.
- Includes facultative bacteria which can work with low concentrations of oxygen
- It does not contain any dangerous substance.
- Eco-designed product according to the norm ISO 14006

FEATURES

Appearance : Solid
 Colour : Grey
 Odour : Perfumed
 Apparent density (g/cm³) : 1 - 1,02
 pH (water solution 2%) : 8,5 - 10,5
 Water solubility : Dispersible
 Biodegradability : Complies with the directive CEE 648/2004
 Bacterian count : > 10^{^8} (ufc/gr) on date of production

INSTRUCTIONS

There are many factors to be considered in order to establish the right dosage (flow, volume and kind of septic tank, concentration of wastes, etc.). In each case our Technical Department can advise on the most suitable dosage.

Orientative dosages per 1 m³ of septic tanks are:

- Shock initial treatment: 200 gr. of product (fill 2 times the scoop to the 100ml mark) for each cubic meter of the tank over 4 consecutive days.
- Maintenance treatment: 200 gr. per cubic meter of septic tank per week.

When the septic tank is not accesible, the product can be previously diluted in hot water. The product should be added as close as possible to the tank. Later add plentiful water to the pipe in order to make sure that the product arrives to the tank. As a precaution measure, in case biocides disinfectants are used, it is recommended to rinse with water the pipes before using the product.

PRECAUTIONARY STATEMENTS

EUH208 - Contains sensitising substance(s). May produce an allergic reaction. Substance(s): celulasa;Lipasa
 EUH210 - Safety data sheet available on request.

- The product has live microorganisms. Do not eat, drink or smoke while use
- The enzymatic activity decreases after two years of stable storage.

PICTOGRAMS - CLP

No danger pictograms

ENVIRONMENTAL INFORMATION

ECODESIGN:

This product has been ecodesigned in accordance with the environmental Management System of the process of design and development: Ecodesign according to the standard ISO 14006

The product is classified as class B in a scale that goes from A to G, A being the best environmental classification and G the worst. The scale belongs to INTEMAN SA.

MEASURES AND RECOMMENDATIONS:

USE: The quantity applied must be the lowest possible to achieve the best results. See the instructions and dosage section of this technical sheet.

Distribution and transport: this product is NOT regulated by the European Agreement concerning the International Carriage of Dangerous Goods by Road ADR.

Elimination: when the product has been used up, the packaging is NOT classified as hazardous waste (RP). Code LER: 15 01 02

Presentation

Buckets of 5 and 10 kg.
Case with 10 buckets of 1 kg.

Expiry

24 months

Conservation

- Keep the product within its original packaging
- Do not store the product pre-diluted in water. Only dilute during the time of use.
